

INCIDENT MANAGEMENT SITUATION REPORT
SATURDAY JUNE 21, 2003 - 0830 MDT
NATIONAL PREPAREDNESS LEVEL 2

CURRENT SITUATION:

Initial attack activity was light nationally with 150 new fires reported. Four new large fires were reported one each in the Eastern Area, the Southwest, the Western Great Basin and in the Eastern Great Basin. Six large fires were contained, three in the Southwest and one each in the Southern Area, the Western Great Basin and the Eastern Great Basin. Very high to extreme fire indices were reported in Alaska, Arizona, California, Colorado, Nevada, New Mexico, Texas and Utah.

SOUTHWEST AREA LARGE FIRES:

ASPEN, Coronado National Forest. A Type 1 Incident Management Team (Humphrey) is assigned. This fire is burning in timber with heavy ground fuels near the town of Summerhaven, AZ. Extreme fire behavior caused by high winds and low relative humidity with group torching, uphill runs and short range spotting was observed. Structure protection is in place in the Summerhaven community. Crews are building fireline on the east and west flanks. Fire intensity continues to prohibit accurate evaluation of structural damage.

PICTURE, Tonto National Forest. A Type 2 Incident Management Team (Philbin) is assigned. This fire is burning in ponderosa pine, chaparral and juniper ten miles northeast of Tonto Basin, AZ. Active fire behavior with rapid rates of spread and spotting up to one quarter mile was observed. Crews are constructing fireline on the east and west flanks.

HELEN 2, Saguaro National Park. A Type 2 Incident Management Team (Raley) is assigned. This lightning caused fire is burning in thick timber near Tucson, AZ. Limited access and steep difficult terrain are hampering containment efforts. Moderate fire behavior with isolated torching was observed.

DRY LAKE COMPLEX, Gila National Forest. A Fire Use Management Team (Goheen) is assigned. This lightning caused Wildland Fire Use complex, comprised of the Dry Lake, Sycamore, and Moonshine fires, is burning in pinyon pine, ponderosa pine, grass and mixed conifers 27 miles northwest of Silver City, NM. Active fire behavior was observed on the west flank of the Dry Lake fire and on the Moonshine fire. Resources will continue hot spotting on the northern perimeter of the Moonshine fire with assistance from aerial resources.

POWELL, Grand Canyon National Park. A Fire Use Management Team (Kitchen) is assigned. This lightning caused Wildland Fire Use fire is burning in timber with heavy ground fuels 23 miles northwest of Grand Canyon Village, AZ. Observed fire behavior included backing, isolated torching and occasional short, wind driven runs.

PICACHO RESERVOIR, State of Arizona. This fire is in grass and brush, eight miles north of Picacho, AZ. The fire is being monitored and patrolled.

MORGAN, Gila National Forest. This lightning caused fire is in the Aldo Leopold Wilderness Area, 34 miles west of Truth or Consequences, NM. The fire is burning in ponderosa pine, grass and mixed conifer with heavy dead and down fuels. No visible smoke was observed. The fire will be monitored by air and lookout towers. This will be the last report unless significant activity occurs.

ALASKA AREA LARGE FIRES:

SAND CREEK, State of Alaska. This fire is burning in black spruce, tundra, and hardwoods, 25 miles northeast of Delta Junction, AK. Fire behavior observed was moderate runs along southwest edges and backing fire along northeast edge. Crews are providing structure protection.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

SOUTHERN CALIFORNIA AREA LARGE FIRES:

SAGEHEN, Inyo National Forest. A Type 2 Incident Management Team (Dietrich) is assigned. This lightning caused fire is burning in pinyon pine, sage brush and heavy grasses 13 miles north of Benton, CA. Limited access and rugged terrain are hampering containment efforts. Torching and limited spotting was observed. Reduction in acreage is due to more accurate mapping.

EASTERN AREA LARGE FIRES:

THISTLEDEW FIRE, Minnesota Department of Natural Resources. This fire is located 18 miles west of Sturgeon, MN burning in conifer. Active fire behavior caused by high winds and warm temperatures was observed on the north flank. Dozers are constructing fireline on the west flank while aerial support is working the east flank.

OUTLOOK:

Weather Discussion: Windy conditions will persist over the Southwest, Great Basin and Rocky Mountain Areas as an upper trough of low pressure lingers over the northwest. This trough is also producing dry, windy weather over the Great Lakes area. Much of the east will be dry except for showers over the mid-Atlantic and Gulf Coast states. In Alaska, high pressure will continue over the eastern interior for generally warm, dry weather except for a few showers and thundershowers over the Alaska Range and western areas.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
ROCKY MOUNTAIN AREA Scattered afternoon thunderstorms north and east. Dry south.	70s and 80s, except 60s to mid 70s mountains.	10 to 25% lower elevations, 25% to 45% mountains and east.	Southwest 10 to 25 mph western sections, southeast 15 to 30 mph in the east.
EASTERN GREAT BASIN AREA Partly cloudy with widely scattered thunderstorms northern Utah. Much cooler Idaho.	50 to 75 mountains, 75 to 102 lower elevations.	22 to 40% mountains, 4 to 20% in the lower elevations.	West to northwest 15 to 25 mph Idaho. Southwest 20 to 35 mph Utah, Arizona Strip.

<p>WESTERN GREAT BASIN AREA A deep trough of low pressure will bring cooler temperatures and gusty winds to most of the state. Mostly sunny skies.</p>	<p>In the north: 70s to mid 80s at low elevations, 60s to 70s in the foothills and mountains. In the south: 80s to mid 90s at low elevations and 70s to 80s at higher elevations.</p>	<p>10 to 18% lower elevations, 15 to 25% higher elevations, 20 to 40% in the Sierras.</p>	<p>Southwest to northwest 10 to 20 mph with areas of 15 to 25 mph. Local afternoon gusts could reach 40 mph in higher elevations.</p>
<p>SOUTHERN CALIFORNIA AREA Morning low clouds and fog with local drizzle to the lower coastal slopes, otherwise mostly sunny,</p>	<p>70 to 82 mountains and coastal valleys, 80 to 90 inland valleys and upper deserts, and 95 to 105 lower deserts.</p>	<p>30 to 45% mountains and inland valleys, 50 to 65% coastal valleys, and 10 to 25% deserts.</p>	<p>Southwest to northwest 10 to 20 mph with higher gusts over the mountains and deserts.</p>
<p>NORTHERN CALIFORNIA AREA A few areas of night and morning coastal fog and low clouds. Mostly sunny elsewhere with a few afternoon cumulus over the northern and eastern mountains.</p>	<p>60s at the coast, 60s and 70s higher elevations, and 80s to near 90 interior valleys.</p>	<p>50% or higher coast. Inland valleys, 15 to 25% north and east, and 30 to 40% southwest. Inland mountains 25-40%.</p>	<p>Northwest 5 to 15 mph with gusts to 25 to 30 mph higher elevations and coastal areas, SW to NW 5 to 10 mph with afternoon gusts to 20 mph valleys.</p>
<p>ALASKA AREA Interior, mostly sunny in the north. Partly cloudy with isolated showers and thunderstorms in the south and west.</p>	<p>67 to 80.</p>	<p>25 to 40%.</p>	<p>Variable to northeast 5 to 15.</p>

EXTREME FIRE BEHAVIOR (continued)

Extreme fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
 - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
 - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds
 - Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur, strong wind velocities may drive fire behavior to extremes.

- To aid situational awareness, track NFDPS live and dead fuel moisture outputs.

- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using "Table 74: Fire Severity Related to Fuel Moisture Chart," firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
